Dear FE fundinfo Hiring Team,

I've spent more than 15 years building software and taking loosely formed ideas through to useful products. I've done that as a founder, product designer, and hands-on engineer: working out what the first version should be, building it, and putting it in front of people. I am comfortable moving between customer conversations, product decisions, and software development.

I'm genuinely excited by the prospect of working somewhere I have the autonomy to choose the right tools and turn ideas into professional-looking prototypes in days. Keeping up with new AI tools has become an important part of how I work. Although I've been coding for more than 15 years, what I enjoy is the process of creating products, not writing code.

At Func Main, I design and build my own products alongside selected client work. Recently that has included [BlaBlaAHA!](#), an AI-native language app with custom content-production workflows; an agent that turns a photograph of a festival poster into a playlist; and a code-driven video editor built with Next.js and Remotion. I also competed in three one-week ElevenLabs hackathons, winning Gold for an [interactive film/website](#) built with ComfyUI, Seedance, AI music, Logic, and React.

Earlier, I founded Active in Time and grew it from a one-person business to a team of five. We worked directly with UK leisure operators, built a profitable SaaS platform, and turned our consumer swimming app into a four-year global partnership with Speedo. At Pentland Brands, I worked inside the Innovation Team building prototypes for brands including Lacoste, Speedo, and Berghaus.

I hope you agree that I'd be a good fit for this role, and I'd love the chance to sell myself face to face.

Best,

Daniel Morgan

SUMMARY

Founder and product engineer with 15+ years building products from early ideas through to launch. I have founded companies, built apps and SaaS products, worked with startups and global brands, and remained hands-on with design and engineering throughout. More recently I have been using AI-assisted development to build my own products and experiments.

SKILLS

Product design, full-stack development, iOS development, Elixir and Phoenix, JavaScript and TypeScript, APIs and databases, customer research, rapid prototyping, product strategy, AI-assisted development, technical design, and client communication.

EXPERIENCE

Func Main, Founder, Tech & Product - June 2016 - Present

Independent product studio where I design, build, and ship my own products alongside selected client work. My role spans customer research, product design, technical architecture, hands-on implementation, launch, and iteration.

- BlaBlaAHA! - AI-native language app designed, built, and launched from scratch, with custom workflows for rapidly producing and reviewing content.
- Bend.com - AI, social, and backend feature work for one of the world's most popular stretching apps.
- ElevenLabs Hacks - Three rapid prototype builds using voice, generative media, agents, and web technologies; won Gold in the Vercel challenge.
- Remotion Video Creator - Next.js tool for prompting, composing, and rendering videos directly from code.
- Photo to Playlist - Agent workflow that reads a flyer or festival poster and turns it into a playlist.

Active in Time Ltd, Founder & Product - July 2012 - Present

Founded a health and leisure technology company that grew from one person to five full-time employees. Built and operated a profitable SaaS platform for UK leisure operators, and led the product partnership that relaunched Splashpath globally as Speedo Fit through an exclusive four-year agreement with Speedo.

Wilde, Chief Executive Officer - September 2019 - December 2020

Secured investment from Founders Factory and assembled the team to launch a new queer travel product, leading discovery, product strategy, hiring, partnerships, and investor communication until COVID stopped travel.

Pentland Brands, Creative Technologist - March 2018 - September 2019

Worked inside the Innovation Team to rapidly design and build web and mobile prototypes for global brands including Lacoste, Speedo, and Berghaus, turning early strategic opportunities into tangible experiments.

Beeline, Mobile Product Design & Development - May 2016 - January 2017

Worked directly with the founders to plan, prototype, design, and build the first version of the Beeline app after a successful Kickstarter campaign.

EDUCATION

Bournemouth University - Bachelor's Degree, TV Production, 2003 - 2006. Grade: 1st.

INTERESTS

Spanish, padel, water polo, music, podcasting, photography, and queer community projects.
