Dear FE fundinfo Hiring Team,

I've spent more than 15 years building software and taking loosely formed ideas through to useful products. I've done that as a founder, product designer, and hands-on engineer: working out what the first version should be, building it, and putting it in front of people. I am comfortable moving between customer conversations, product decisions, and software development.

I'm genuinely excited by the prospect of working somewhere I have the autonomy to choose the right tools and turn ideas into professional-looking prototypes in days. Keeping up with new AI tools has become an important part of how I work. Although I've been coding for more than 15 years, what I enjoy is the process of creating products, not writing code.

At Func Main, I design and build my own products alongside selected client work. Recently that has included [BlaBlaAHA!](#), an AI-native language app with custom content-production workflows; an agent that turns a photograph of a festival poster into a playlist; and a code-driven video editor built with Next.js and Remotion. I also competed in three one-week ElevenLabs hackathons, winning Gold for an [interactive film/website](#) built with ComfyUI, Seedance, AI music, Logic, and React.

Earlier, I founded Active in Time and grew it from a one-person business to a team of five. We worked directly with UK leisure operators, built a profitable SaaS platform, and turned our consumer swimming app into a four-year global partnership with Speedo. At Pentland Brands, I worked inside the Innovation Team building prototypes for brands including Lacoste, Speedo, and Berghaus.

I hope you agree that I'd be a good fit for this role, and I'd love the chance to sell myself face to face.

Best,

Daniel Morgan
